

ManageEngine

IT management simplified

Real-time IT management solution for the new speed of business

ManageEngine

Enterprise IT management software division of Zoho Corporation

Founded in 1996 as AdventNet

Privately held, rock- solid supplier and partner

Headquartered in Pleasanton, California

Millions of customers across
industries

ManageEngine: The enterprise IT management division of Zoho Corporation

(Est. 1996)

Privately held and profitable since inception

(Est. 2005)

Work.Online

Applications for business, collaboration, and productivity

(Est. 2002)

ManageEngine

Enterprise IT management solutions

(Est. 1996)

Enterprise Internet of Things and unified network management solutions

ManageEngine **solutions**

Active Directory management

- Active Directory
- Exchange Server
- Self- service portal
- Recovery and backup

Endpoint management

- Desktop management
- Mobile device management
- OS deployment
- Patch management
- Browser management

IT service management (ITSM)

- Help desk
- Asset life cycle
- CMDB and ITIL
- Customer support

IT operations management (ITOM)

- Network performance
- Application performance
- End-user experience
- Network change and configuration
- Converged infrastructure
- Storage infrastructure
- Bandwidth and traffic
- SQL server monitoring

IT security

- Log management
- Firewall analysis
- Vulnerability analysis
- Application control
- Privileged password management
- Network anomaly detection

On-demand

- Application performance
- Help desk software
- Active Directory recovery and backup
- Mobile device management
- Patch management
- Log management

2 million users

3 of every **5** Fortune **500**
companies are
ManageEngine customers

ManageEngine® Application Control Plus

An integrated **application control** and
endpoint privilege management
solution

Why do you need an **application control solution**?

Security threats

Privilege-based attacks

Running **applications without any filtering or controlling** can result in

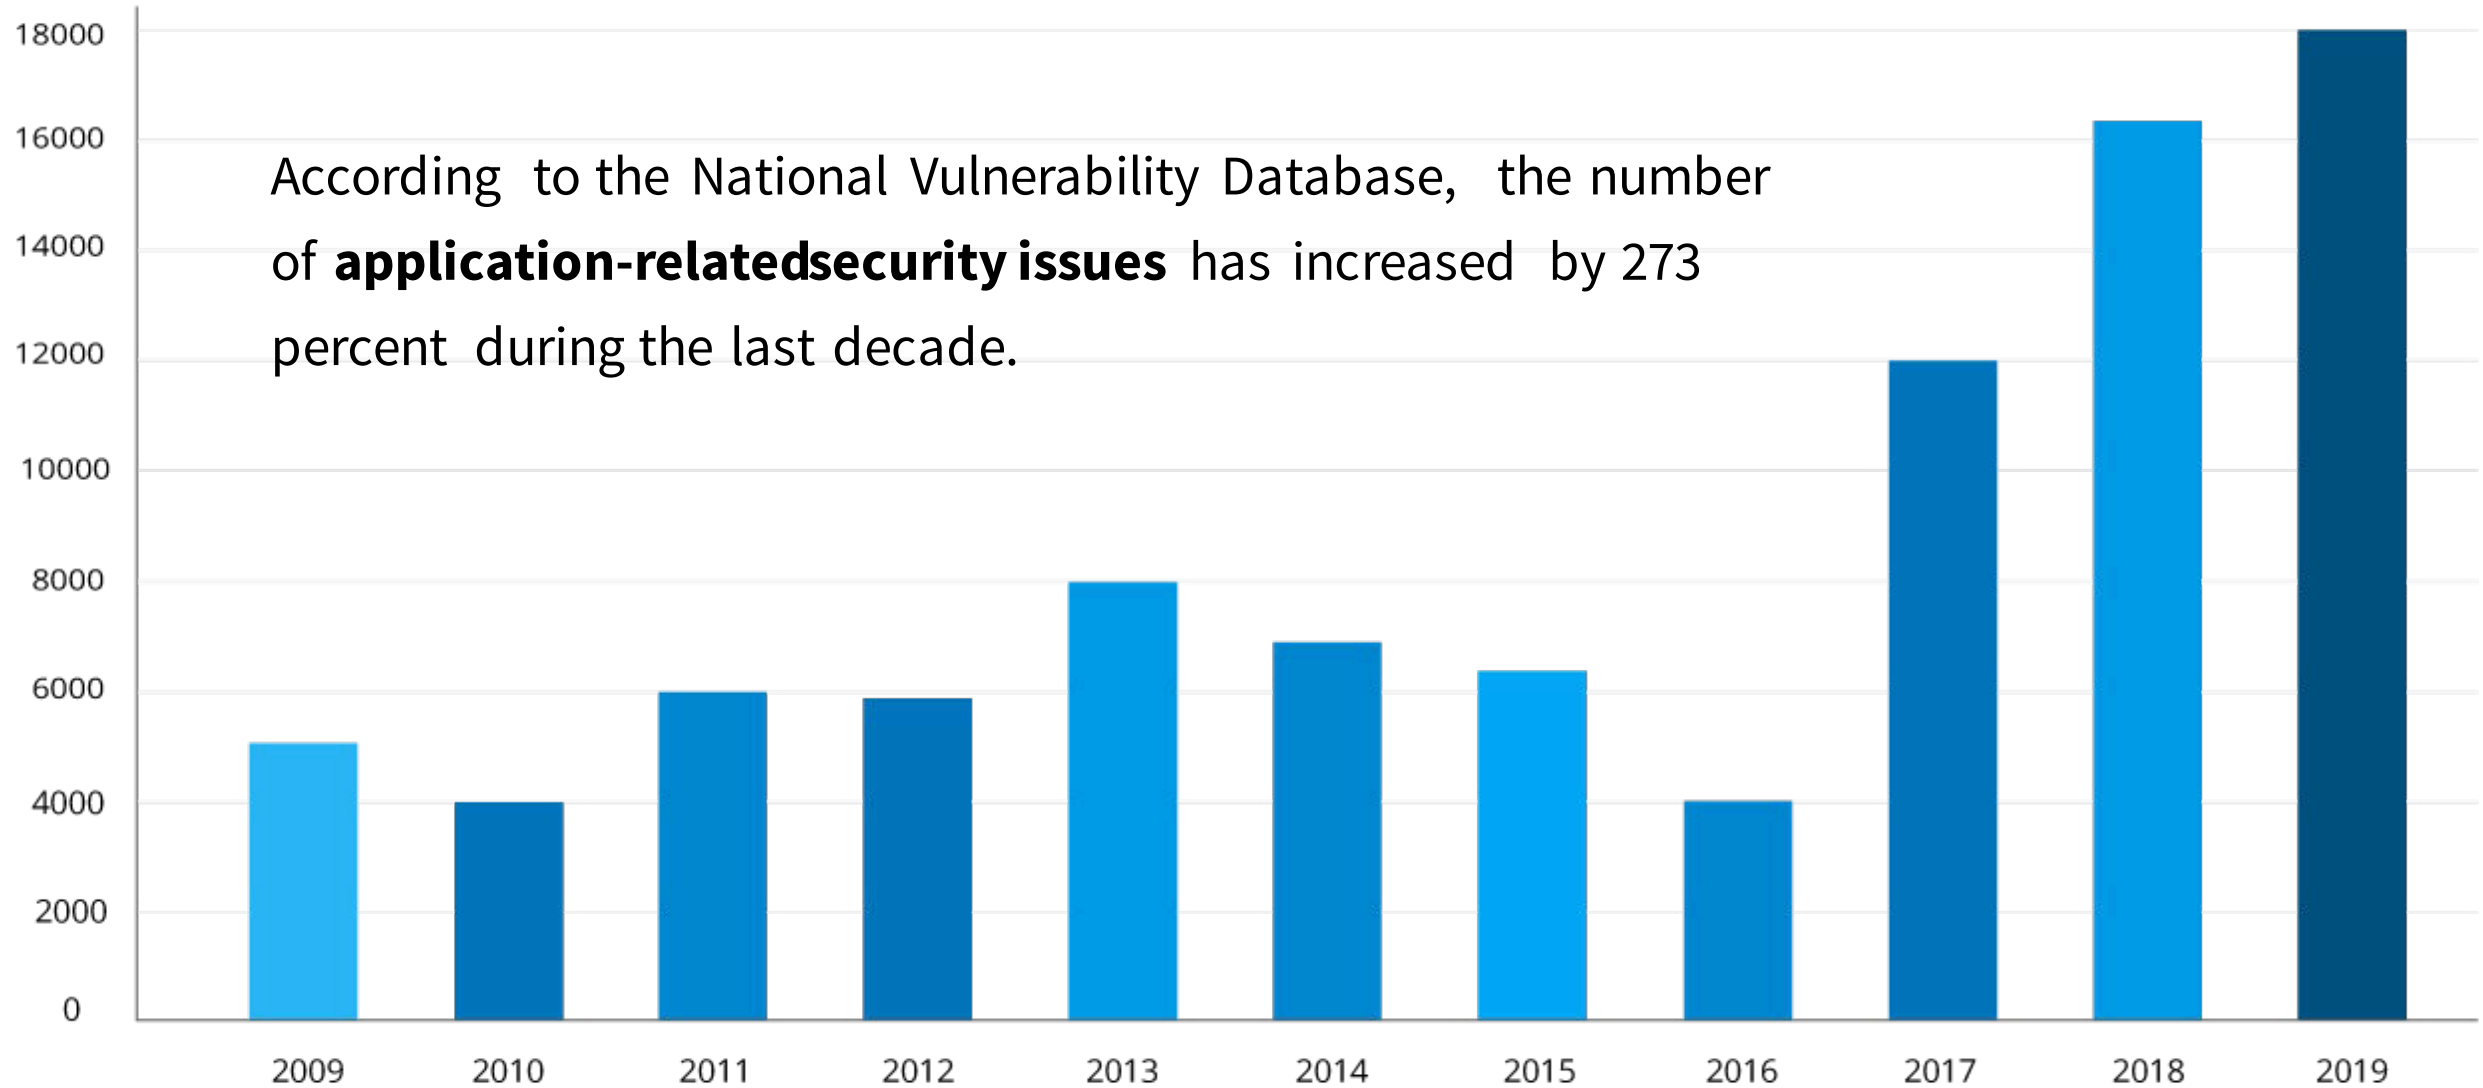

Extensive management efforts

Productivity dips

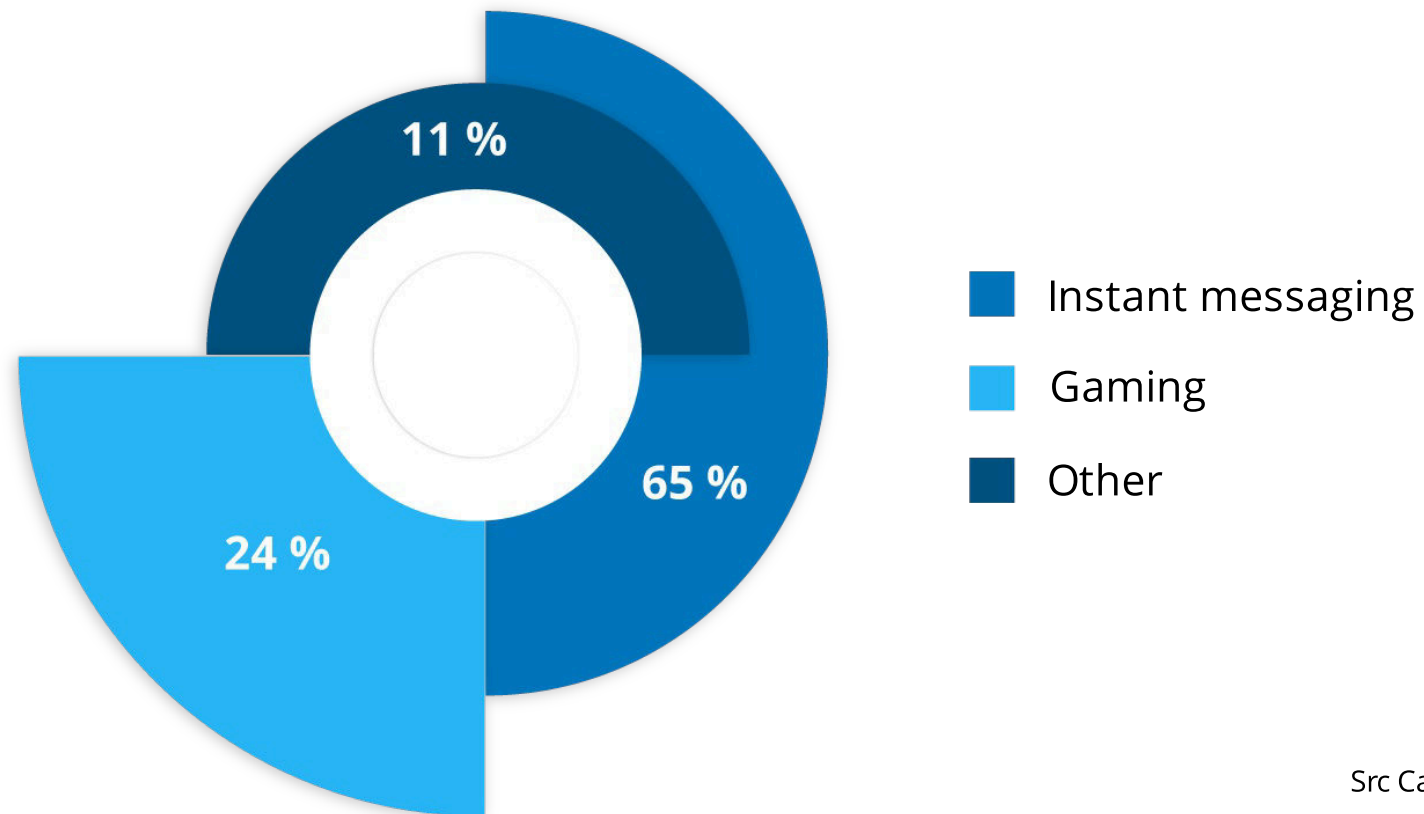

Threats have almost become synonymous with **applications**

According to the National Vulnerability Database, the number of **application-related security issues** has increased by 273 percent during the last decade.

Applications that cause **drop in productivity**

Applications used for **instant messaging** and **games** tend to be a common hindrance to efficiency at any workplace

The more **applications**, the more effort required for **patching**

Limiting applications by running only what is truly necessary would expedite IT management activities to a huge extent

“

Forrester estimates that **80** percent of security breaches involve **privileged credentials**

”

Privileged credentials are required to access certain applications. Traditional solutions often do not recognize privileged credentials as an **attack surface**

Roadblocks to effective **Application Control** using traditional solutions

- Building and managing lists can be a very tedious process
- Application control solutions might interfere with the proper functioning of critical OS applications
- Lack of flexibility with respect to control functions
- Identifying and resolving greylisted applications is cumbersome

A single solution for all your application control needs

Application Control Plus is a security solution that enables the instant discovery and categorization of applications, giving enterprises a holistic view of their application ecosystem. With its seamlessly integrated application control and privilege management features, Application Control Plus ensures that only authorized application access is permitted, minimizing an enterprise's attack surface while helping it improve its productivity levels

How does **Application Control Plus** work?

Discover

Discover all installed applications, applications running with elevated privileges, and local admin accounts created in the network.

Group

Eliminate all unnecessary admin accounts, and group applications that need to be whitelisted and blacklisted along with those that require elevated access.

Associate

Create user device groups and associate them to corresponding app groups, allowing users in these groups to access required applications with and without elevated privileges even while remaining standard users.

Features at a glance

- ❖ Application whitelisting
- ❖ Application blacklisting
- ❖ Remove admin rights
- ❖ Endpoint privilege management
- ❖ Just-in-time access
- ❖ Child process control
- ❖ Flexibility regulator
- ❖ Reports

Application **whitelisting**

- ❖ Discover all installed applications
- ❖ Categorize applications as authorized and unauthorized
- ❖ Filter and view applications specific to a group of end-user devices
- ❖ Create trust-centric application whitelists based on rules like vendors, product names, file hashes, verified executables, store apps and folder paths
- ❖ Update lists automatically as and when new applications are discovered

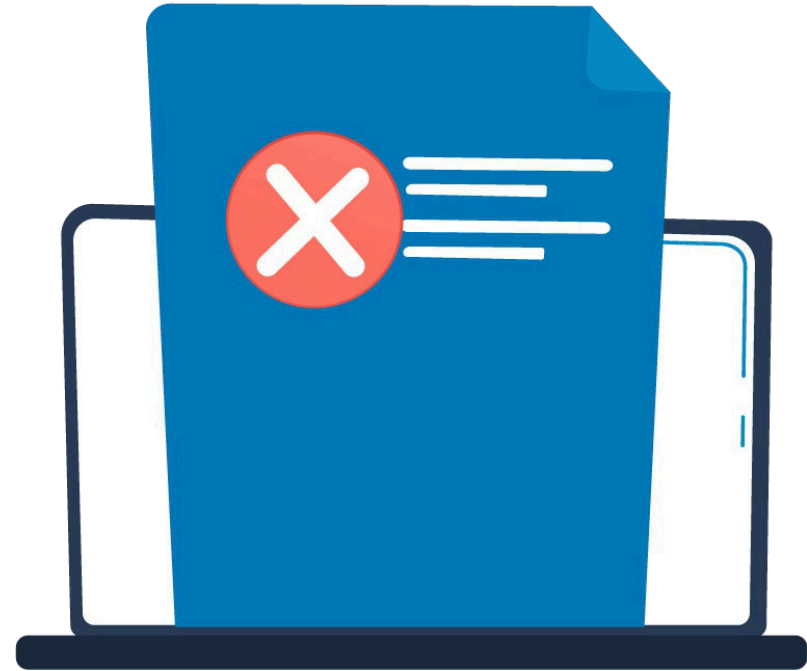

Application **blacklisting**

- ❖ Exercise granular and broad levels of control by blacklisting both applications and executables
- ❖ Build and manage blacklists automatically by leveraging rules like vendors, products, verified executables, file hashes, and folder paths
- ❖ Block applications that might be affecting your productivity like games or instant messaging applications
- ❖ Prohibit the running of executables that might be malicious

Remove admin rights

- ❖ Implement the principle of least privilege.
- ❖ Identify and remove all unnecessary local admin accounts that exist in the network.

Endpoint privilege management

- ❖ Prevent threats due to the misuse of privileged credentials
- ❖ Discover and qualify apps that are run as administrators, and ensure business continuity by allowing even standard users to elevate access only to those essential apps.

Just-in-time access

- ❖ Handle user's interim needs without compromising on security.
- ❖ Enable temporary application and privileged access that are automatically revoked after a set period.

Child process control

- ❖ Prevent malware strategies that involve creating malicious child processes to exploit parent applications.
- ❖ Create global policies that allow exercise of control over the execution of those child processes.

Flexibility regulator

- ❖ Leverage dual-mode flexibility to gain a preview of the network with the application control policies applied before they're strictly enforced
- ❖ Personalize your application control approach with either an enterprise-uniform mode or a multi-tiered strategy, which distributes policies of varied flexibility to users based on their credibility
- ❖ Quickly resolve greylisted apps with built-in workarounds that are offered

Reports

- ❖ Pre-defined reports
 - Executables from non-verified publishers
 - Greylisted products
 - Blacklist access attempts
 - Applications running with administrator privileges
 - Discovered applications
- ❖ Schedule reports

Editions

01

Free Edition

Up to 25 computers

- » Suitable for SMBs
- » Fully functional
- » Up to 25 computers

02

Professional

suitable for computers in LAN & WAN

- » Discover installed applications
- » Whitelist and blacklist applications
- » Control flexibility modes
- » Identify and resolve application greylists
- » Endpoint Privilege Management
- » Insightful dashboards and reports
- » Remove admin rights
- » Just-in-time access

How does Application Control Plus **benefit your organization?**

- Minimize the attack surface by establishing the principle of Zero Trust
- Proactive approach to prevent malware, APTs, and zero-day attacks
- Reduce dips in productivity by blacklisting apps like games and instant messaging
- Prevent threats caused due to the misuse of privileged credentials and unauthorized privilege elevation
- Cut down inventory management efforts
